

**End Range of Motion Improvement, Inc. Announces Nationwide Availability
Of its ERMI MPJ Extensionater[®] Device for Hallus Limitus and Rigidus**

ATLANTA...(June, 2006)...End Range of Motion Improvement, Inc. (ERMI) announced that it is now making its ERMI MPJ Extensionater device available throughout the U.S. The non-surgical device restores motion to the first MPJ for patients with Hallux Limitus and Hallux Rigidus.

The company, which has provided solutions to patients with arthrofibrosis for 15 years, has focused on the shoulder, elbow, knee and ankle. The ERMI MPJ Extensionater, designed by Robert Weinstein, DPM, is the company's first entry into the rapidly growing podiatric market.

Thomas Branch, M.D., the company's Medical Director said "While we are well established and recognized for unsurpassed clinical outcomes in the orthopaedic healthcare arena, we are very excited to begin working with Podiatrists to treat their patients with motion restrictions in the MPJ and ankle joints."

About ERMI, Inc.

Founded in 1991, ERMI, Inc. is a leader in patient controlled, mechanical therapy for non-operative treatment of arthrofibrosis. The company participates in the treatment of thousands of patients each year, saving millions of healthcare dollars by the avoidance of manipulation under anesthesia and additional surgeries.
