

End Range of Motion Improvement (ERMI), Inc. Joins Forces with MSC Network

September 1, 2004 Atlanta, Georgia. ERMI, Inc., the leader in mechanical therapy for post-operative motion loss, has signed a contract with MSC Network, a leading administrator of worker's compensation insurance claims. This partnership is effective immediately for all patients and healthcare providers falling under the affected plans.

Fredrik Westin, President of ERMI, said "We are delighted to enter into this agreement with MSC. Our mechanical therapy devices save insurance companies and employers thousands of dollars by restoring patient's motion and getting them back to work without the costs of additional procedures in the hospital operating room."

Under the terms of the agreement, affected patients and healthcare providers falling under MSC's plans will be granted access to ERMI's mechanical therapy devices when motion loss is diagnosed and mechanical therapy required for restoring joint motion.

ERMI, Inc. was founded in 1990 with the goal of developing non-surgical treatment alternatives for patients suffering from post-operative motion loss.

Today ERMI, Inc.'s devices have been used to treat over 14,000 patients, and now include mechanical therapy devices for the knee, ankle, elbow and shoulder.

MSC - Medical Services Company, is a Nationwide Leader in the delivery of medical products and pharmacy services to the workers' compensation industry. MSC serves both the workers' compensation insurance carrier as well as the injured worker.

Founded in 1985, MSC's promise from the start has been to deliver quality products and services while being ever mindful of cost containment. MSC has accomplished many of its innovative ways by listening carefully to our customers and then implementing its own thoughts and those of the customer to bring them to fruition.
